The next monthly meeting of the Wellesley Amateur Radio Society will be Tuesday - JUNE 3RD, at 8PM, in the Wellesley Branch Library.

The primary purpose of this meeting will be preparations for field day - and anyone interested in participating must attend or let John Porter, K1PRB know your desires. This is when we plan the entire operation, and your presence will provide additional thoughts on this once a year project.

Field day weekend is June 28-29, with 27 hours total operation permitted, including setup time. So it is important we plan now to make the most of the 24 hours operation we are allowed.

It is expect this will be the last meeting until September, however, mention is again made of the net which operates every wednesday night at 8PM on 28. 7 Mc. I as many have failed to remember of late, however the net started off well with 4 stations reporting in. A total of ten stations said in reply to questionaire that they had 10meter operation, so lets all try to remember the net and keep contact through the summer. Possibly we are meeting too often making it every week, but this can be discussed at this coming meeting - and lets hope we see you all on frequency through the summer to provide some discussion on the coming seasons activities. The net has been both discussion of club activities - and bull session among the members, so come on up and lets have a good group show up. With summer coming and reruns on TV, you will have a good opportunity to talk with your fellow club members on the 10 meter net.
